

Emissions & Compliance Solution:

Turn Compliance into a Competitive Edge.

Legacy systems and manual processes are holding you back. Outdated systems and fragmented workflows make emissions tracking and compliance reporting a burden rather than a strength. Operators waste hours on paperwork, risk penalties for missed deadlines, and lack real-time visibility to act on critical issues—until it's too late.

EZ Ops' mobile-first Emissions & Compliance solution transforms field data capture, emissions monitoring, and regulatory reporting into seamless digital workflows. Empower field teams to manage compliance, reduce risk, and stay audit-ready—anytime, anywhere.

Capture Emissions Data Seamlessly from the Field:

Digitize readings for Catadynes, PSVs, Vessels, and other emission-producing assets with mobile-first tools—online or offline. Instantly update Catadyne status (On/Off/Repair Needed), auto-generate tasks and track lifecycle events, and avoid manual logs with automated timestamps and data trails.

Real-Time Insights Ensure Proactive Compliance:

Automated alarms and configurable inspections identify issues early—long before they become violations. Configure alarms for overdue inspections or asset inactivity, flag PSVs and tanks due for inspection or nearing compliance windows and prevent environmental incidents with predictive workflows.

Streamlined Reporting to Meet Regulatory Requirements:

Integrated workflows ensure your team stays ahead of reporting cycles, with built-in AER/TDG support and custom regional forms. Includes configurable schedules with attached inspections and corrective actions, and historical digital records for every emissions-related asset.

53%

Reduction in compliance reporting time

Automated workflows and mobile data capture eliminate paperwork delays and streamline regulatory submissions

100%

Visibility into PSV & Vessel inspection status

Real-time dashboards ensure no asset is overlooked, helping teams stay audit-ready and in control.

150%

More hazards identified

Digitized inspections empower teams to spot risks early, before they become costly violations.
