

# Mobile Task Management:

## Putting Task Prioritization & Execution in the Hands of the Oilfield.

Oilfield operations are bogged down by scattered tasks across hundreds of assets—causing inefficiencies, compliance risks, and unplanned downtime. Field teams juggle outdated logs, chat apps, and manual coordination, making execution and decision-making difficult. Reporting and data analysis? Nearly impossible. **Saving just 5 minutes per task across 150 monthly tasks can add up to \$1.9M in annual efficiency gains.**

**EZ Ops** is a mobile-first platform built by operators for operators. It centralizes task scheduling, prioritization, and completion—online or offline. Whether tasks are entered manually or triggered by workflows, each site gets a single, prioritized list, improving visibility, execution, and team efficiency.

**Front-End Access, Backoffice System Integration:** Putting immediate application access in the hands of field ops while easily integrating with your existing back-office system.

**Automated Task Creation:** Custom workflows on any form type can be set up to trigger task creation through validation requirements.

**Dynamic Prioritization:** Ability to manually or automatically prioritize tasks based on predefined potential impact and urgency.

**Real-time Accountability, Collaboration & Visibility:** Get immediate notifications on task updates and alert teams in the field or office on incomplete tasks.

**Centralized Field Tasks:** Consolidate all operational, maintenance, and compliance tasks into a single platform allowing analysis and reporting.

**Offline Ready Field Tools:** Capture data, update tasks, and submit reports even in remote areas.

**Custom Workflows:** Configure forms and task templates to fit your operational needs – inspections, maintenance, reading sheets, and more.

# 70%

**Reduction in Missed Tasks**

Real-time visibility with alerts and notifications prevent missed tasks from being completed on time.

# 30%

**Faster Execution on Critical Tasks**

Prioritization and alerts ensure the most critical tasks are addressed first.

# 30%

**Reduction in Operating Expenses**

Streamlined task execution, reporting, and resource allocation to cut OpEx and reduce admin overhead.

## Ready to Increase Efficiency of Field Tasks?

**Save 5 minutes per task to save millions annually.**

Schedule a demo with our team to see how mobile task management can transform the efficiency of your field operations and produce more profitable wells.
