

Inspection Management:

Proactive Inspections Prevent HSE Incidents & Unplanned Downtime

Inspections are critical to avoid unplanned downtime, emergency repairs, and HSE incidents—all of which drive up OpEx and reduce profitability. But with thousands of tasks across remote sites, field teams struggle to prioritize inspections and follow through on corrective actions. Without a unified system, managing, analyzing, and reporting inspections becomes fragmented and inefficient.

EZ Ops enables field teams to perform and manage inspections via a mobile-first platform built for oil and gas. Inspections are scheduled in advance, and any failures automatically trigger corrective tasks—ensuring issues are resolved before failure. Compliance and reporting are streamlined in one centralized system.

Complete inspections digitally, anywhere, anytime::

Operators can conduct recurring or ad-hoc inspections on any asset—from tanks to pipelines—whether they're online or offline. Failed inspections auto-generate corrective actions so nothing is missed.

Stay ahead of compliance and operational risks:

All inspections are time-stamped and fully searchable with digital audit trails, ensuring compliance with regulatory mandates and simplifying audit prep.

Drive accountability with real-time tracking and dashboards:

Inspection statuses and follow-ups are visible across field and office teams through dashboards and reports, enabling faster resolution and better planning.

Automate follow-ups and corrective actions:

Inspections can auto-trigger tasks for failed responses, ensuring safety and maintenance issues are addressed before they become costly problems.

48%

Faster Resolution

Field teams using EZ Ops resolved inspection-related issues nearly 2x faster with automatic task generation and centralized visibility.

100%

Compliance Tracking

Track inspection completion rates, corrective actions, and overdue items with automated reports—ensuring nothing falls through the cracks.

150%

More Issues Resolved

Better scheduling and management of inspections lead to significantly more issues resolved prior to failure reducing risk across field operations.

Protect your field & your bottom line.

Proper inspection management could save you millions annually in operational efficiencies and reduction of unplanned downtime due to equipment failure.
