

Simplify Shift & Crew Changes with EZ Ops Digital Logbook

**Create Instant Visibility. Eliminate Paper.
Gain Full Operational Transparency.**

Paper logbooks create fragmented communication, slows shift and crew changes, and creates a lack of visibility of historical events. The result – poor coordination, lost action items, potential safety incidents, delays in receiving information, and operational inefficiencies.

EZ Ops' Digital Logbook replaces outdated paper logbooks, spreadsheets, and chat tools to create a historical, searchable record of events. This enhances collaboration, accountability, clarity, and operational efficiency by creating immediate visibility and transparency at the time of entry – all in the palm of your hand.

Streamline Shift & Crew Changes:

Capture updates as they arise and ensure no details are lost. Record entries specific to your location. Ensure all who need visibility to that location have permission to view the logbook. Create your logbook entry wherever you are – online or offline.

Increase Visibility & Transparency:

Eliminate the need to be in the field to participate in shift or crew changes. Logbook entries are now visible to those in the office and field. With configurable categories and fields, filtering and searching for data becomes easy.

Drive Accountability:

Ensure the right people see entries and updates as they occur by creating mandatory acknowledgements. Audit logs create visibility into who has acknowledged and reviewed the entry.

150%

Increase in Communication Efficiency

Operators reported better documented information, faster shift changes, and visibility between field and office.

48%

Faster Resolution to Cross-Shift Field Issues

Operators reported faster resolution due to well documented logbook entries and better communication during shift or crew change.

30%

Decrease in Issue Oversight

Logbook entries in a single, digital platform reduces issues being overlooked or not communicated during shift changes.
