

Ticketing and Hauling Management: Deliver More, Waste Less – Digitize Field Logistics

Manual dispatching, paper tickets, and disconnected workflows are holding your logistics back. Field operations teams struggle with inconsistent ticket documentation, delayed approvals, and lack of transparency—leading to higher costs, compliance risks, and underutilized assets.

EZ Ops Fieldlink simplifies water and fluid hauling by digitizing the entire lifecycle—from load request to ticket approval—on a mobile-first platform designed for seamless use by operators, vendors, and dispatchers alike.

The screenshot shows a mobile app interface for creating a manifest. It includes fields for Operator (Southwestern Energy), Manifest Date (10/09/2019), Source Location (MA Well), Water Type (Production), Source Volume (110), Destination Location (CT PAD), Driver Name (Nuverra Driver), and Vehicle ID (Nuverra Test Vehicle). There is a checkbox for 'Check if additional Driver is needed'. Below this is a section titled 'Step 1 - Confirm Identity and Manifest' with a checkbox for 'I certify the work was completed as detailed above'. At the bottom, there are fields for Driver E-Signature (Nuverra Driver), Driver E-Signature Timestamp (10/09/2019 4:40 PM), and buttons for 'Previous', 'Save & Next', 'Cancel', 'Complete', and 'Start New Manifest'.

Streamline Hauls from Source to Disposal with a Unified Workflow

Create and manage digital tickets directly from the field:

Enter source, destination, truck data, service type, and water type—all from your mobile device.

Live visibility into active tickets and driver check-ins:

Track where trucks are, who's en route, and which requests are open, in progress, or completed - updated in real time.

Full manifest and non-manifest support for compliance:

Enforces structured data capture with validation and optional attachments to meet operator and disposal site requirements.

Collaborate Seamlessly with Vendors and Disposal Sites

Vendors and 3rd parties use the same mobile platform:

Allow named or device-based logins, ensuring anyone—from field techs to truck drivers—can log and complete tickets.

Disposal site visibility and approval workflows:

Site operators view, approve, or reject submitted manifests directly from the system, accelerating billing and reducing disputes and disposal site requirements.

35%

Reduction in

administrative overhead

Automated ticket generation and mobile approvals cut down back-office workload and processing delays.

25%

Faster ticket

turnaround time

Digitized workflows reduce the time from request to approved invoice-ready ticket.

100%

Manifest accuracy

for compliance

Built-in validation and structured templates ensure complete and auditable records every time.
