**PAYLOAD**™

**Payload is a cloud-based, mobile ticketing and hauling solution that digitizes your load activity from request to invoice. By connecting the field, carriers, drivers, and the office in real-time, loads are managed more efficiently saving you time and money and ensuring on-time deliveries to your operations.**

- **Reduced Logistics Cost**
- **Simplified Compliance**
- **Increased On-Time Deliveries**
- **Increased Load Tracking**

# EZOPS PAYLOAD™

## The Problem with Paper Processes

Paper ticketing slows down operations and increases risk and cost.

### Common issues:

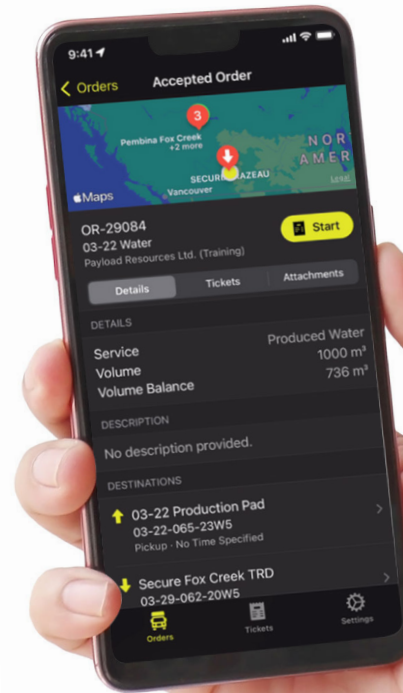

- High administrative effort and costs
- Long audit and dispute processes
- Fines for missing documentation
- Illegible forms create inaccurate data
- Long reconciliation cycles
- No automated analytics or reporting

## What PAYLOAD changes immediately:

- ✓ Reduces paper and storage costs
- ✓ Lowers administrative effort
- ✓ Simplifies audits and disputes
- ✓ Reduces missing forms to eliminate fines
- ✓ Provides accurate data with built-in reporting
- ✓ Enables real-time field data capture
- ✓ Minimizes delays in operations with increased on-time deliveries

# EZOPS PAYLOAD™

MAXIMIZE PRODUCTION + MINIMIZE COST + MANAGE COMPLIANCE & SAFETY

Servicing operators,  
oilfield services  
and carriers.

## How PAYLOAD does it:

- Built-in common data points (locations, rates, service types, waste codes, receiver info)
- Regulatory forms generated to match paper versions
- Built-in workflows and approvals
- Multi-sided platform for Operators, Oilfield Services and Carriers
- Digital repository of every document and its status
- TDG (Transport Dangerous Goods) Option for participating countries
- Reporting and analytics included

## Key features:

- Live map for operational oversight
- Driver mobile app with time and location-stamped events
- Manage-by-exception flagging
- Built-in audit trail and approvals
- Reporting with KPIs, trends, forecasts, dashboards

## How PAYLOAD Works

### ORDER >>> TRACK >>> VERIFY >>> REPORT

Generate work orders/tickets and assign to carriers. Carriers assign to drivers. Data is captured in the driver mobile app.

Track ticket activity in real time with a live map. See in-transit quantities, products, volumes, and wait times.

Carrier admins review and cost tickets. Clients approve or dispute in-app. Multi-stage client approval supported.

Auditable reporting on transactional activity. Assess vendor performance, identify inefficiencies and non-compliance. Downloadable reports.
